ABOUT THE **PROJECT**

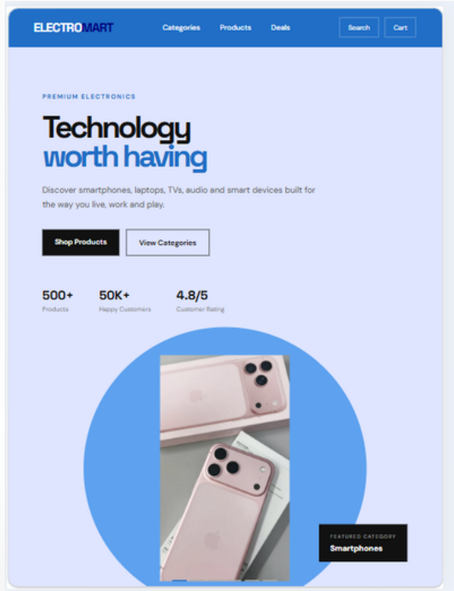

CONCEPT

- A modern e-commerce website focused on electronics.
- Designed around smartphones, laptops, audio, TVs, cameras and wearables.
- Clean product discovery experience with a strong visual homepage.
- Built as a project for the Frontend Engineering context.

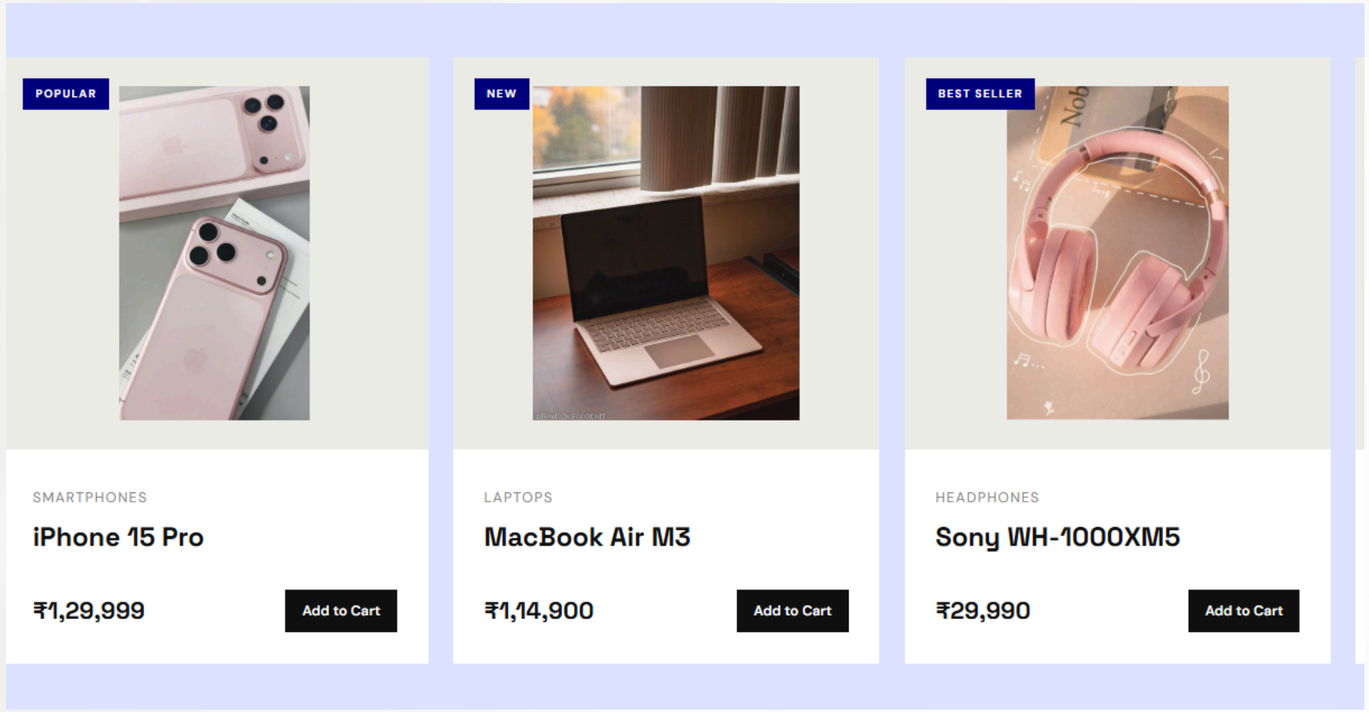

THE PROBLEM

- Traditional shopping interfaces can become cluttered and difficult to navigate.
- Users need quick access to categories, products and product information.
- ElectroMart organizes the experience into clear, focused sections.

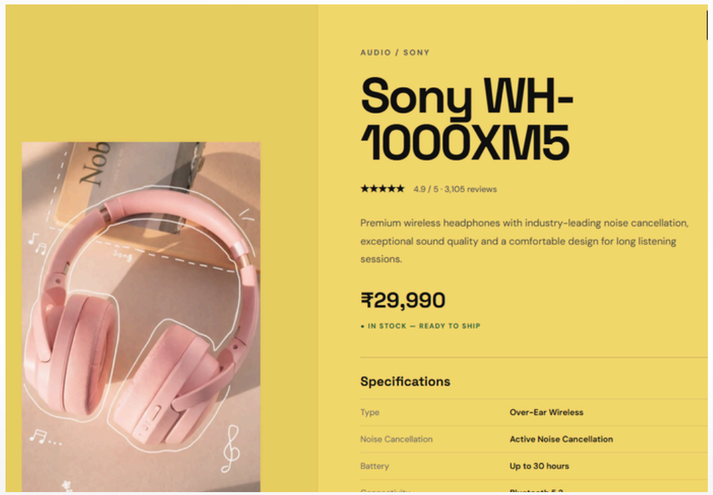

WHAT WE AIM TO ACHIEVE

1

USER EXPERIENCE

create a clean, responsive and easy to navigate shopping interface.

2

PRODUCT DISCOVERY

make categories , featured products and search easy to access.

3

PRODUCT INFORMATION

provide useful details, pricing, ratings, stock and descriptions.

4

CART FLOW

Support adding products to a cart and managing quantities.

5

RESPONSIVE DESIGN

keep the interface usable across desktop and smaller screens.

6

TEAM WORKFLOW

develop through shared Github based collaboration and modular files.

WE PROVIDE TO

SOLVE

USER SIDE CHALLENGES

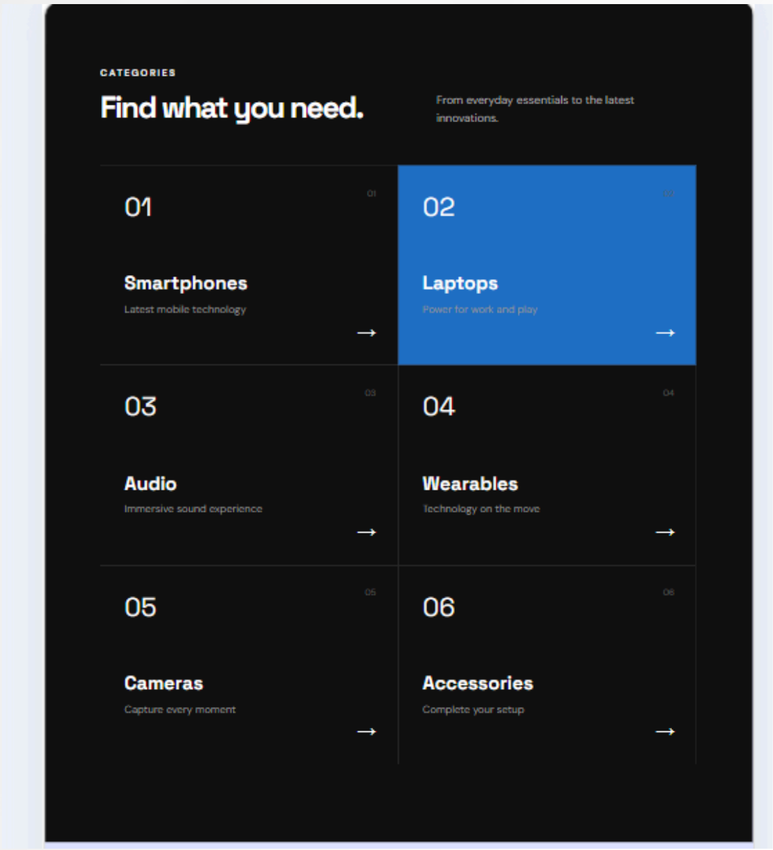

- too many products can make browsing overwhelming.
- important product information is often scattered.
- finding a specific product should require minimum effort.
- a shopping interface should work clearly without visual clutter.

PROJECT RESPONSE

- category based organisation.
- search interaction for product discovery
- dedicated product detail view
- cart flow for selcected products
